

# How to apply Printed vinyl signs to dividers

## Application Tips:

- We have included some test signs for practice. Please follow the instructions to the right with the test signs before attempting application of your own signs.
- Dividers and signs can be cleaned with warm soapy water.
- Do not use metholated spirits or any other harsh cleaning agents.
- Vinyl signs can be removed but not reused.

## Application steps:

- 1** Clean your divider surface and ensure it is dry before commencing application.
- 2** For **slimline dividers**: place onto the back edge so front is facing the roof. The rounded back corners are on the top of the divider.  
For **acrylic collection dividers** ensure you are applying the sign to the correct side of the divider.
- 3** Remove the backing paper from the vinyl sticker ensuring it doesn't stick to itself.
- 4** Line the sign up by eye ensuring it is centred on the front of the divider.
- 5** Carefully lower the sign down onto the divider being careful not to trap any air under the vinyl sign.
- 6** Working from the centre out to the nearest edge, smooth out any bubbles with a damp cloth and your fingers.
- 7** Finish by firmly smoothing over the sticker with a damp cloth.
